

For your information:

UCUC contracts with Lloyd Pest Control to apply insect repellent to the outside perimeter of the building once a month. They come on the last Friday of the month after the children have left the premises.

They use the safest pest control products. Below is a list of materials that have been applied regularly.

- Rosemary oil – used most months
- Eugenol & thyme oil – used a couple of times a year

We will be posting a notice 24 hours before the insecticide is applied (the last Thursday of each month) and posting the notice of actual application through the Monday following application. If you wish to register to be notified every month that a pesticide is going to be applied, please register with Kendra or Jessie in the office.

Below is a short form for you to sign and return.

Pest Management Notification

I have been informed of pesticide use at the UCUC facility. I understand that on the last Friday of each month after children have left, the premises applications will be conducted.
